Senior Product manager | Enterprise B2B SaaS Leader | 0→1
Product Builder | AI-Native Product Strategist | Product Growth,
Platform Transformation & GTM | Driving Retention, NPS, CAC &
Revenue Outcomes

Bengaluru, Karnataka, India

Summary

I am a Product Management Leader with 15+ years of technology experience and over a decade of building, scaling, and transforming Enterprise B2B SaaS products across Retail, Utilities, ERP, and Platform ecosystems. Throughout my career, I have partnered with executive stakeholders, engineering teams, architects, designers, and business leaders to translate complex customer challenges into scalable digital products that deliver measurable business value. My expertise spans: ✓ Enterprise SaaS Product Strategy ✓ Product Vision, Roadmaps & Execution ✓ 0→1 Product Development & Scale ✓ Platform Modernization & Transformation ✓ AI-Enabled Product Innovation ✓ Product-Led Growth (PLG) ✓ Customer Experience & Retention Optimization ✓ Product Analytics & Data-Driven Decision Making ✓ Agile Product Leadership ✓ Cross-Functional Stakeholder Alignment Some of the outcomes I've delivered include: Improved Enterprise Retention by 25% through data-driven product optimization Increased NPS by 18 points via customer-centric UX enhancements and experimentation Reduced Customer Acquisition Cost by 50% through product-led growth initiatives Generated \$250K+ annual savings by transforming fragmented ERP ecosystems into unified SaaS platforms Reduced Time-to-Market by 40% while maintaining a 95%+ sprint success rate Built and scaled SaaS products from 0→10 enterprise customers delivering 5X revenue growth Embedded AI-powered automation and intelligent workflows into enterprise product experiences I am passionate about helping organizations leverage product thinking, customer insights, data analytics, and AI to create products that customers love and businesses depend on.

Experience

Accenture

10 years 2 months

Senior Product Manager – B2B SaaS & Platform (Individual Contributor)
2021 - Present (5 years)

Bengaluru

- Owned end-to-end product for global retail and utility clients, operating as trusted advisor across Engineering, UX, Architecture, and business stakeholders.
- Acted as Product Owner for agile delivery teams, ensuring backlog readiness and successful sprint outcomes; lifted activation rates and boosted NPS by 18 points through iterative, research-led UX and A/B experimentation.
- Collaborated with engineering, design, and architecture teams to refine the end-to-end product roadmap; drove \$250K+ in annual savings by modernizing fragmented ERP workflows into a unified SaaS platform across 8+ global entities.
- Defined success metrics, KPIs, and reporting mechanisms with Amplitude, Mixpanel, and SQL; leveraged data-driven decision-making to diagnose churn drivers and improve enterprise retention by 25%.
- Embedded AI-enabled user experiences and data-driven automation into product strategy, identifying opportunities to leverage AI for workflow automation and customer experience improvement, driving measurable efficiency gains.
- Led cross-team alignment and dependency management across Engineering, Design, and GTM teams, facilitating timely trade-off decisions and prioritization without formal authority; sustained 95%+ sprint success rate and cut time-to-market by 40%.
- Led and analyzed beta testing and customer validation efforts, synthesizing customer feedback and operational signals into ROI dashboards and a unified roadmap; secured 2-year contract renewals by producing clear product narratives and decision documents for executive stakeholders.
- Conducted market research and competitive analysis to inform product vision and strategy, fostering cross-functional partnership to acquire 5 enterprise clients and reduce CAC by 50% through targeted product-led positioning.
- Drove UX optimization and interface design improvements, incorporating UX best practices and customer feedback; elevated platform adoption by 30% through customer-centric product thinking.

Product Manager — Enterprise SaaS & Platform Growth
June 2016 - May 2021 (5 years)

Gurugram

- Defined and executed full-lifecycle product strategy and GTM for B2B SaaS and utility clients, reducing order processing time by 15% and technical debt by 30%, saving €50K.
- Led cross-functional alignment through influence without authority in a matrixed environment, closing feedback loops between users and product teams, improving platform NPS by 30% and reducing support resolution time by 25%.
- Translated customer workflow insights into epics, features, and user stories, designing and launching a configurable GTM offering that acquired 3 enterprise clients and reduced CAC by 20%.
- Managed platform integrations and security/compliance considerations for Atrias (utility B2C platform), conducting deep customer workflow analysis, reducing onboarding friction, and driving mobile-responsive feature adoption. Accelerated release velocity by 20% through CI/CD and SDLC improvements, ensuring operational readiness and validated delivered functionality

Columbus A/S

Technical Product Manager

April 2012 - September 2015 (3 years 6 months)

Greater Hyderabad Area

- Operated as individual contributor Product Owner and defined product vision for a greenfield SaaS/ERP platform for a UK-based retail enterprise, leading a cross-functional team of 8 consultants across 3 geographies, maintaining 90% + feature delivery rate.
- Conducted 40+ customer workflow mapping and process mapping sessions, delivering 20% improvement in super-user efficiency through structured discovery, continuous feedback loops, and operational signal analysis.
- Introduced Agile frameworks and execution discipline across multiple workstreams, reducing timeline uncertainty by 60%, giving enterprise stakeholders predictable delivery windows with clear trade-off visibility.

InnoVites

Technical Product Manager

March 2009 - October 2011 (2 years 8 months)

Hyderabad

- Drove end-to-end SDLC ownership from 0 to 10 enterprise B2B clients, achieving 5X YoY revenue growth in 2 years through rigorous product discovery, lifecycle management, and translating product concepts into epics, acceptance criteria, and requirement documents.

- Ensured scalability, reliability, and performance of enterprise SaaS platform, securing Microsoft ISV certification by resolving all security, compliance, and best-practice gaps; established enterprise-grade operational readiness.
- Reduced QA time by 35% by automating 60% of testing and applying structured acceptance criteria validation; enhanced onboarding efficiency by 40%, reinforcing shipping velocity, product quality, and scalable delivery processes.
